

The best ideas are from individuals.

The biggest achievements are from communities.

The **European Center for Innovation in Geospatial & Location Based Services** is a community of over 135 organizations, led by **Oracle** and **Tele Atlas** who have come together to accelerate the market for location-aware solutions in Europe.

If you are a developer or user of geospatial-related data, service components or applications, you're invited to join our community. You'll get access to a complete infrastructure including Tele Atlas MultiNet Europe and an Oracle-based platform, accessible via Oracle OGC interfaces, with geospatial services like map display, geocoding and routing and Oracle BPEL orchestrating services into a distributed architecture.

With the support of the Community, our members have developed highly innovative projects. Join us today to network with the most innovative and dynamic geospatial and LBS community in the world. Now visit the site and become a member!

Registration is easy, quick and free!
